Reference letter

Our company has used the system of lead-acid battery regeneration from company Hoffmann to check its functionality.

We have tested some of our batteries with the device DF48 and then also regenerated them and we can confirm that we have achieved very good results. A 48V 690Ah battery was an extremely discharged battery with a voltage of **approx. 34V**, where a conventional charger did not respond at all and the battery was simply intended for disposal. We were able to bring this battery to **97% of the capacity** using the regeneration.

We hereby confirm that we are very satisfied with the DF48 device, that the Hoffmann regeneration system is working properly and that we can highly recommend it.

Sincerely yours

Sigrid Vetter
